Professional Summary

Aspiring Cloud and DevOps Engineer with strong foundations in Java, Spring Boot, AWS Cloud, Linux, and Data Structures & Algorithms. Hands-on experience in CI/CD pipelines, Docker, Kubernetes, Terraform, and cloud-based application deployment. Passionate about building scalable, secure, and automated cloud solutions while continuously learning modern cloud-native technologies.

Education

Rajiv Gandhi University of Knowledge Technologies, Srikakulam
B.Tech in Computer Science

2022 – 2026
CGPA: 8.77/10.0

Technical Skills

Programming Languages:	Java, Python (Basic), Shell Scripting
DevOps & Cloud :	AWS (IAM, EC2, S3, VPC), Docker, Kubernetes, Jenkins, CI/CD, GitHub Actions, Ansible, Terraform
Backend Development :	Java, Spring Boot, RESTful APIs, Microservices Architecture
Tools :	Git, GitHub, Prometheus, Grafana, Helm, Postman, VS Code, STS and Eclipse

Internships

DevOps Intern – SkillDzire

May 2025 – June 2025 (Remote)

- Worked on containerizing and deploying a Java-based application using **Docker**.
- Created Dockerfiles, built Docker images, and managed containers for smooth application deployment.
- Gained hands-on experience with CI/CD concepts, and AWS basics in a collaborative DevOps environment.

Projects

Docker-Based Java Application Deployment

- Containerized a Java application by creating a **Dockerfile** and building optimized Docker images.
- Set up local development and deployment workflows using Docker for multi-container orchestration.
- Tools Used: Docker, Docker Compose, Git, GitHub, Linux, Shell Scripting

CI/CD Pipeline for Java Application Using Jenkins

- Built an automated CI/CD pipeline using **Jenkins** to compile, test, and package a Java application.
- Integrated GitHub for webhook-based automation and deployed builds to a Docker container environment.
- Tools Used: Jenkins, Git, GitHub, Docker, Linux, Shell Scripting

Kubernetes Deployment of Spring Boot Application

- Containerized a Spring Boot application using Docker and deployed it on a Kubernetes cluster.
- Managed application deployment using Kubernetes **Deployments, Services, ConfigMaps, and Ingress**.
- Implemented rolling updates and application monitoring using Pods and ReplicaSets.
- Tools Used: Kubernetes, Docker, Spring Boot, GitHub, Linux, AWS EC2.

End-to-End AWS DevOps Automation Project

- Provisioned AWS infrastructure using **Terraform** and configured servers with **Ansible**.
- Built CI/CD pipelines using **Jenkins** and deployed Dockerized applications on AWS.
- Tools Used: AWS, Terraform, Ansible, Jenkins, Docker, Git, GitHub, Linux.

Certifications

CLOUD COMPUTING – NPTEL DESIGN AND ANALYSIS OF ALGORITHMS – NPTEL

SANFOUNDRY GLOBAL EXAM – SANFOUNDRY OBJECT-ORIENTED ANALYSIS AND DESIGN – NPTEL

Volunteering

- SGC – Students' Gymkhana Center:** Executive member of the Finance Economics and Commerce (FEC) Club, contributing to finance-related activities and discussions.
- SPIC MACAY:** Volunteered for one week during the 10th International Convention, assisting in event management, coordination, and supporting guest activities.

Personal Interests

- Actively exploring open-source DevOps projects on GitHub and learning DevOps tools
- Passionate about Cloud and AI technologies, currently learning Prometheus, Grafana, Helm, and AI-powered tools for monitoring, automation, and deployment optimization.
